My Story

Hi, I'm Megan! I'm a UI/UX Designer with a background in digital advertising and a degree in International Business and Marketing. As a Paid Search analyst-turned-UI designer, I have experience with critical thinking, project management, A/B testing, and merging business objectives with user needs, in addition to technical design skills in Sketch and Adobe XD. I've also learned basic HTML, CSS, and JavaScript, having created this website from scratch.

Before graduating from the UI Design CareerFoundry bootcamp, I learned universal skills from my experience working at digital advertising agencies such as meeting deadlines, cross-team collaboration, building client relationships and analyzing data to inform decisions.

As a User Interface Designer, I enjoy designing digital products that are easy to use. Besides my avid interest in design, I am passionate about travel, food and live music.
